

# Full Page Performance Improvement

The section.io platform is unique in its ability to optimize the full page load experience. Other CDNs only target components of the time spent loading a website, with section.io we have optimisations to improve performance at every part of the page load and the unique ability for you to test your CDN configuration in development environments, test environments and finally in Production.

## section.io PAGE LOAD IMPROVEMENT

section.io

- > Platform designed for HTML caching
- > CDN is available in dev, test and production
- > Real time metrics & logs
- > Instant visibility of HTML performance

- > Flexible configuration options
- > Extensive metrics with high level views
- > Real time logs

- > Front End Optimisation (FEO) module
- > 50+ optimisations available
- > Build custom optimisations for your code base
- > Build in dev first, then test locally, then release to production

TRADITIONAL CDNs

- > No interface to build flexible rules
- > No visibility of HTML cache performance
- > Delays in logs and metrics
- > No development process

- > Some configuration options
- > High level metrics

- > Unable to help this part of page load
- > May offer "magic" features that can break sites in production as their functionality is proprietary and unable to be tested
